Overview

Nine prompts. Not fifty, not a hundred — nine, because that is what the workflow in the Workflow Overview chapter actually requires. Each one exists to produce a specific, necessary output, not to pad a page count.

#	Prompt	Produces
01	Job Posting Analysis	Structured breakdown of the target role
02	Experience Inventory	Your single source of truth
03	Resume Bullet Rewrite	Clear, honest resume bullets
04	Resume Tailoring	Role-tailored bullet selection and order
05	Cover Letter	A grounded, tailored cover letter
06	LinkedIn Headline & Summary	Updated headline and About section
07	STAR Interview Preparation	Structured interview answers
08	Salary Negotiation	Negotiation script and worksheet
09	Career-Change Narrative	Transferable-skills bridge narrative

Format used by every prompt

- **Purpose** — what it does and why.
- **Required Inputs** — what you must have ready.
- **The Prompt** — the exact text to paste into your AI assistant.
- **Expected Output** — what correct output looks like.
- **Truth Check** — the specific question to ask before trusting the output.
- **Refinement Step** — what to paste back if it needs correcting.

The instruction every prompt shares

Every prompt in this library includes a version of this instruction, because it is the single most important rule in this system:

Use only the information explicitly provided in this conversation. Do not invent, assume, exaggerate, or infer any employer, title, date, responsibility, skill, metric, or outcome that was not stated. If something is missing or unclear, output [NEEDS INPUT: ...] describing exactly what you need, instead of guessing.

If you ever see an AI assistant produce output that ignores this instruction, stop, correct it using the Refinement Step, and re-run the Truth Check before continuing.

Prompt 01 -- Job Posting Analysis

Purpose

Before you tailor anything, you need to know exactly what the role is actually asking for — not what you assume it's asking for. This step extracts requirements, themes, and keywords directly from the posting text, and separates what's explicitly stated from what's ambiguous.

Required Inputs

- The full text of the job posting (copy the entire posting, including the "about us" and "responsibilities" sections — don't trim it down first).

The Prompt

You are helping me analyze a job posting before I tailor my application materials to it.

Use only the information explicitly provided in this conversation. Do not invent, assume, or infer any requirement, responsibility, or expectation that is not stated in the posting text below. If something in the posting is vague or ambiguous, note it as unclear rather than resolving it yourself.

Job posting text:

""

[PASTE FULL JOB POSTING HERE]

""

Produce a structured breakdown with these sections:

1. **MUST-HAVE REQUIREMENTS** — explicitly required qualifications, experience, or skills.
2. **NICE-TO-HAVE / PREFERRED** — explicitly stated as preferred, bonus, or a plus.
3. **RECURRING KEYWORDS AND THEMES** — words, phrases, or concepts that appear more than once or are clearly emphasized.
4. **IMPLIED PRIORITIES** — what the posting's structure, order, or emphasis suggests matters most to this employer (label this section as inference, since it is reading between the lines rather than a direct quote).
5. **UNCLEAR OR AMBIGUOUS ITEMS** — anything in the posting that is vague, contradictory, or could be interpreted more than one way.

Do not evaluate whether I am a good fit. That is not this step's job — this step is only about understanding the posting itself.

Expected Output

A five-section breakdown as specified. Sections 1–3 should be near-verbatim extractions from the posting. Section 4 should be clearly labeled as inference. Section 5 may be short or even empty if the posting is clear — an empty section 5 is a valid, good result, not a failure.

Truth Check

Does every item in sections 1–3 trace back to actual text in the posting? If the AI added a requirement that "most postings like this" usually have but this one didn't state, that's a fabrication — remove it.

Refinement Step

If you find an added requirement, paste this back:

Re-check your breakdown against the posting text. Remove any item in sections 1–3 that is not explicitly stated in the posting, even if it's common for similar roles. Move genuinely inferred items to section 4 and label them clearly as inference.

Prompt 02 -- Experience Inventory

Purpose

This is the foundation of the entire system. Every later step — resume, cover letter, LinkedIn, interview prep, negotiation, career-change narrative — draws only from what gets recorded here. Nothing enters this document unless you actually typed it.

Required Inputs

- Time and willingness to answer the questions honestly and specifically. Rough notes are fine; polish happens in later steps, not here.
- A list of the roles, projects, or experiences you want to inventory (can be as short as one role if you're short on time).

The Prompt

You are helping me build a factual inventory of my work experience. This is the foundation document for everything else I'll do — it must contain only things I actually tell you, nothing else.

Use only the information I provide in this conversation. Do not invent, assume, exaggerate, or infer any employer, title, date, responsibility, metric, or outcome I have not stated. If I mention something vaguely, ask a clarifying question instead of filling in a plausible-sounding detail. If I don't know an exact number (e.g., "increased sales" but no percentage), record it as-is and mark it [METRIC NOT PROVIDED] rather than estimating one.

For each role, project, or experience I describe, ask me in order:

1. Employer/organization name, title, and dates (or "project" if not a formal role).
2. What was I actually responsible for, day to day?
3. What did I work on, build, fix, or deliver that I'm proud of or that took real effort?
4. Do I have any numbers, results, or outcomes attached to that work? (If I don't know, say so — don't guess.)
5. What tools, systems, or skills did I actually use?
6. Is there anything about this role I'd rather downplay or that I'm unsure how to describe? (This helps me flag it for extra care later, not to hide it.)

After I answer for one role, summarize what I told you in a clean, organized entry, then ask if I want to add another role. Do not add anything I did not say. If I correct something, update the entry — do not keep the old version.

Expected Output

One structured entry per role/project, containing only what you stated, with [METRIC NOT PROVIDED] or [NEEDS INPUT] markers wherever you didn't have a specific detail. No adjectives like "successfully" or "significantly" unless you used them or the outcome you described clearly supports them.

Truth Check

Read every sentence in the inventory and ask: "Did I actually say this, in these words or clearly this meaning?" If any sentence surprises you, it doesn't belong.

Refinement Step

Go through the inventory entry by entry. For each sentence, tell me whether it came directly from something I said, or whether you added or inferred it. Flag anything you added so I can decide whether to keep, correct, or delete it.

Prompt 03 -- Resume Bullet Rewrite

Purpose

Turn the raw, unpolished entries from your Experience Inventory into clear, strong resume bullets — using only what's already there. This step is about clarity and structure, not new content.

Required Inputs

- The relevant section(s) of your Experience Inventory (Prompt 02 output).
- Optionally, the recurring keywords/themes from your Job Posting Analysis (Prompt 01), so phrasing can lean toward language the employer already used — without changing what actually happened.

The Prompt

You are rewriting resume bullets from a factual experience inventory. You must not add any fact, metric, or outcome that is not already present in the inventory text below.

Experience inventory (source of truth):

""""

[PASTE RELEVANT INVENTORY SECTION HERE]

""""

Optional — recurring keywords/themes from the target job posting, for phrasing only, not for adding claims:

""""

[PASTE KEYWORDS HERE, OR LEAVE BLANK]

""""

Rewrite each inventory item into one strong resume bullet using this pattern where the inventory supports it: [Action verb] + [what was done] + [result or scope, only if stated in the inventory].

Rules:

- If the inventory has a number or result, use it exactly — do not round up, exaggerate, or add a percentage that wasn't given.
- If the inventory has no number or result for an item, write the bullet without one, and add a note: [METRIC NEEDED: ask the candidate for an approximate number or scope, if one exists].
- Do not use words like "successfully," "significantly," or "expertly" unless the inventory's own description clearly supports that weight.
- Keep each bullet to one line where possible.

Expected Output

One rewritten bullet per inventory item, each traceable back to a specific inventory sentence, with [METRIC NEEDED: ...] notes wherever a number would help but wasn't provided — never a fabricated number filling that gap.

Truth Check

Pick three rewritten bullets at random and match each word or claim back to the inventory. If a bullet says "reduced costs by 20%" and the inventory only said "worked on reducing costs," that 20% is fabricated and must be removed.

Refinement Step

Compare each bullet you wrote against the original inventory text, word by word for any claim, number, or outcome. List any bullet that contains a detail not present in the inventory, and rewrite it without that detail — replace it with a [METRIC NEEDED] note instead.

Prompt 04 -- Resume Tailoring

Purpose

Select and order your already-verified bullets (Prompt 03 output) to match the specific role's priorities (Prompt 01 output). Tailoring here means choosing what to emphasize and how to order it — never inventing new content.

Required Inputs

- Your rewritten resume bullets (Prompt 03 output).
- Your job posting analysis (Prompt 01 output).
- Your choice of resume template (Resume Template 1 or Resume Template 2).

The Prompt

You are tailoring my resume to a specific job posting. You must only select from and reorder the bullets I give you below — you must not write any new bullet, add any detail, or change the meaning of an existing bullet.

My verified resume bullets:

""""

[PASTE PROMPT 03 OUTPUT HERE]

""

The target role's must-have requirements, nice-to-have items, and recurring themes:

""

[PASTE PROMPT 01 OUTPUT HERE]

""

Do this:

1. For each role/section, select the bullets most relevant to the target role's requirements and themes. You may reorder bullets within a role, but do not alter their wording beyond trivial punctuation.
2. If a bullet is not relevant to this specific role, you may omit it from this tailored version — but list what you omitted and why, separately, so I can review the decision.
3. Do not add a bullet, a skill, or a qualification that addresses a requirement I have no matching content for. If there's a must-have requirement I don't seem to have covered, flag it as a gap instead of inventing coverage for it.
4. Output the final tailored content organized to fit this resume structure:

""

[PASTE TEMPLATE STRUCTURE HERE]

""

Expected Output

A tailored resume draft using only your existing bullets, reordered and selectively included, fit into the chosen template structure — plus a separate list of omitted bullets and any flagged coverage gaps.

Truth Check

Confirm every bullet in the tailored draft appears, unchanged in substance, in your Prompt 03 output. Confirm any flagged "gap" is a real gap and not something the AI could have found if it had looked more carefully at your inventory.

Refinement Step

List every bullet you removed from this tailored version and your reason for removing it. Then list every requirement from the job posting analysis that I do not appear to have matching content for — do not suggest how to fake coverage for these; just list them as gaps for me to decide how to address.

Prompt 05 -- Cover Letter

Purpose

Draft a cover letter that connects your real experience to this specific role, grounded only in what Steps 1–2 already established.

Required Inputs

- Your Experience Inventory (Prompt 02 output).

- Your Job Posting Analysis (Prompt 01 output).
- A tone preference: direct/professional, warm/personable, or concise/executive.
- The employer/role name and, if you have one, the hiring manager's name.

The Prompt

You are writing a cover letter. You must use only the experience described in the inventory below — do not add any employer, achievement, skill, or outcome that is not in it.

My experience inventory:

""

[PASTE PROMPT 02 OUTPUT HERE]

""

Target role analysis:

""

[PASTE PROMPT 01 OUTPUT HERE]

""

Role/company name: [ROLE TITLE AT COMPANY NAME]

Hiring manager name (if known, otherwise write "Hiring Team"): [NAME OR "Hiring Team"]

Tone: [direct/professional | warm/personable | concise/executive]

Write a 250–350 word cover letter that:

1. Opens by naming the specific role and one genuine, specific reason for interest (not a generic "I am excited about this opportunity").
2. Connects two or three real items from my inventory directly to the must-have requirements from the role analysis.
3. Does not restate my entire resume — it should complement it, not repeat it.
4. Closes with a clear, low-pressure call to action.
5. Uses no claim, metric, or outcome that is not present in my inventory above.

If you cannot find inventory content that genuinely connects to a must-have requirement, say so explicitly in a note after the letter rather than writing a vague sentence that implies a connection that isn't there.

Expected Output

A 250–350 word letter in the requested tone, using the provided template structure (the Cover Letter Template), plus an optional note flagging any requirement the letter couldn't honestly connect to your inventory.

Truth Check

Does every specific claim in the letter (a project, a result, a skill) trace back to the inventory? Does the letter avoid vague filler phrases standing in for a connection that isn't actually there?

Refinement Step

Reread the letter against my inventory. Underline (or list) any sentence that makes a claim not directly supported by the inventory, and rewrite those sentences to either use a real inventory detail instead, or remove the claim entirely.

Prompt 06 -- LinkedIn Headline and Summary

Purpose

Bring your LinkedIn headline and About section in line with the same, truthful positioning as your resume and cover letter — consistent, not duplicated word-for-word.

Required Inputs

- Your Experience Inventory (Prompt 02 output).
- The target roles or industries you want your profile to attract (can be more general than one specific posting).

The Prompt

You are rewriting my LinkedIn headline and About section. Use only the experience in the inventory below — do not add any employer, skill, achievement, or outcome that is not in it.

My experience inventory:

""""

[PASTE PROMPT 02 OUTPUT HERE]

""""

Target roles/industries I want to attract: [DESCRIBE, e.g., "Operations management roles in mid-size retail or logistics companies"]

Produce:

1. THREE headline options (under 220 characters each), each taking a slightly different angle (e.g., one skills-forward, one outcome-forward, one role-forward) — all grounded in the inventory.
2. ONE About section draft (150–300 words), written in first person, that summarizes my real background and what I'm looking for next, without restating my resume bullet-by-bullet.

Do not use generic filler phrases ("results-driven professional," "passionate about excellence") unless they are directly supported by something specific in the inventory. Do not claim expertise in a tool or skill that isn't in the inventory.

Expected Output

Three headline options and one About section draft, each consistent with (but not copy-pasted from) your resume and cover letter, using only inventory-backed claims.

Truth Check

Check the About section for generic phrases that aren't backed by a specific inventory detail — these are the most common place vague overclaiming sneaks in on LinkedIn specifically.

Refinement Step

Go through the About section sentence by sentence. Flag any sentence that is generic filler not tied to a specific detail from my inventory, and either replace it with an inventory-backed sentence or remove it.

Prompt 07 -- STAR Interview Preparation

Purpose

Convert your real stories into structured, ready-to-use interview answers using the Situation-Task-Action-Result (STAR) format — built from your inventory, not invented for the occasion.

Required Inputs

- Your Experience Inventory (Prompt 02 output).
- Your Job Posting Analysis (Prompt 01 output).
- Optional: a list of interview questions you already know you'll face (from the employer, a recruiter, or your own research).

The Prompt

You are helping me prepare STAR-format interview answers. Use only the experience in the inventory below — do not invent a story, a result, or a detail that isn't there.

My experience inventory:

""

[PASTE PROMPT 02 OUTPUT HERE]

""

Target role analysis:

""

[PASTE PROMPT 01 OUTPUT HERE]

""

Known interview questions, if any (otherwise I'll rely on your suggestions below): [PASTE QUESTIONS OR LEAVE BLANK]

Do this:

1. Based on the role analysis, suggest 5–8 likely behavioral interview questions for this role (standard categories: teamwork, conflict, failure/learning, leadership, problem-solving, prioritization).
2. For each question, find the closest matching story in my inventory and structure it as STAR: Situation, Task, Action, Result.

3. If my inventory has no story that genuinely matches a question, do not force one — output [NO MATCHING STORY YET: describe what kind of example would answer this, so I can think of one] instead.
4. In the Result section, only include an outcome if my inventory actually stated one. If not, write the action taken and mark the result as [OUTCOME NOT SPECIFIED IN INVENTORY].

Expected Output

5–8 questions, each with either a complete STAR answer traceable to your inventory, or an honest [NO MATCHING STORY YET] flag — never a fabricated story to fill a gap.

Truth Check

For each STAR answer, confirm the Situation, Task, Action, and Result all come from a single, real inventory entry — not stitched together from unrelated facts to sound more impressive.

Refinement Step

For each STAR answer, tell me which specific inventory entry it came from. If any answer combines details from more than one entry in a way that implies they happened together, separate them or flag the combination explicitly.

Prompt 08 -- Salary Negotiation

Purpose

Prepare negotiation talking points and scripts based on market data you have researched yourself and the value you've already documented — never on invented salary figures.

Required Inputs

- Market-range data you have researched yourself, in your own currency, from sources appropriate to your market (e.g., Glassdoor and levels.fyi in the USA; Glassdoor Canada in Canada; Glassdoor UK or Reed in the UK; Seek or Glassdoor Australia in Australia — see the Market Distinctions chapter of this guide for the full list) for this role, location, and level. This system does not look this up or estimate it for you.
- Your Experience Inventory highlights (Prompt 02 output).
- Any offer you've already received, if applicable (amount, and what's included — base, bonus, equity, benefits).

The Prompt

You are helping me prepare for a salary negotiation. Use only the market data and experience details I provide below — do not state or estimate a salary figure that I have not given you.

Market range data I have researched myself, in my own currency: [PASTE YOUR RESEARCHED RANGE, CURRENCY, AND SOURCE, e.g., "58,000-66,000 GBP base, per Glassdoor UK for this title/location" or "75,000-88,000 USD base, per levels.fyi for this title/location"]

My relevant experience highlights: [PASTE RELEVANT PROMPT 02 SECTIONS]

Current offer, if any: [PASTE OFFER DETAILS OR WRITE "no offer yet"]

Produce:

1. A negotiation opening script that states my target range (using only the range I gave you) and connects it to two or three specific value points from my experience.
2. A response script for if the employer's first offer is below my stated range.
3. A short worksheet of 3–5 questions to ask myself to define my walk-away criteria (minimum acceptable total compensation, non-negotiable benefits, timeline pressure).

Do not suggest a specific dollar figure anywhere that I did not provide. If I ask you to suggest a target range yourself, refuse and explain that this requires my own market research, not an estimate.

Expected Output

A negotiation opening script, a lowball-response script, and a walk-away-criteria worksheet — every dollar figure in the output traceable to what you supplied.

Truth Check

Scan the output for any number that doesn't match what you provided. A fabricated salary figure here is the highest-stakes possible fabrication in this entire system — check this output more carefully than any other.

Refinement Step

List every dollar figure or percentage that appears in this output, and tell me exactly where each one came from in what I gave you. If any figure doesn't trace back to something I provided, remove it and replace it with [FIGURE NEEDED FROM CANDIDATE].

Prompt 09 -- Career-Change Narrative

Purpose

Build an honest transferable-skills narrative for a career change — one that clearly distinguishes what genuinely transfers from your prior field, what transfers partially, and what you are still building toward. This is not a way to imply direct experience you don't have.

Required Inputs

- Your Experience Inventory from your prior field (Prompt 02 output).
- The target field's requirements (Prompt 01 output for a representative posting in the new field).

The Prompt

You are helping me build a career-change narrative. Use only my prior-field experience below — do not imply I have direct experience in the target field that I do not have.

My prior-field experience inventory:

""

[PASTE PROMPT 02 OUTPUT HERE]

""

Target field's requirements (from a representative job posting):

""""

[PASTE PROMPT 01 OUTPUT HERE]

""""

Produce three clearly separated lists:

1. **DIRECTLY TRANSFERABLE** — skills or experience from my prior field that genuinely, directly apply to the target field's requirements. Explain the connection honestly; do not overstate it.
2. **PARTIALLY TRANSFERABLE** — skills or experience that relate but would need adaptation or additional context to be relevant. Be specific about what the gap is.
3. **GAPS TO ACKNOWLEDGE** — target-field requirements I clearly do not yet have covered by my prior experience. Do not suggest ways to word around these gaps; list them plainly so I can decide how to address them (e.g., a course, a project, direct honesty in an interview).

Then write a short (100–150 word) narrative paragraph I can adapt for a cover letter or interview, that honestly frames my transition using only items from list 1 and 2 — never implying list 3 items are already covered.

Expected Output

Three clearly labeled lists and one honest narrative paragraph that never implies experience from the gaps list.

Truth Check

Read the narrative paragraph on its own, without the lists. Would someone reading it reasonably conclude you have direct experience in the target field? If so, it's overstating — even if no single sentence is technically false, the overall impression matters.

Refinement Step

Reread the narrative paragraph and tell me if an average reader would come away believing I have more direct target-field experience than I actually do. If so, rewrite it to be clearer that this is a transition, not a continuation.
