

Marmalio Apply

Start Here Guide -- English Master v1.0

What this is

This is a complete, step-by-step system for turning one real job posting and your real experience into a tailored resume, cover letter, LinkedIn profile update, interview preparation, and — if you need it — a salary negotiation script and a career-change narrative.

It is not a list of prompts to skim. It is a workflow: each step produces an output that the next step depends on. Followed in order, it takes you from "I found a job posting" to "I have a complete, honest application package for this specific role."

Who this is for

- You are applying to a specific job posting right now, not writing a generic resume for no particular role.
- You already have real work experience, education, or projects to draw on — this system organizes and presents what you've actually done. It does not invent a career for you.
- You use ChatGPT, Claude, or a similar AI assistant, and want a structured way to get consistently good output instead of guessing at prompts each time.
- You're applying in the USA, Canada, UK, Australia, or another English-speaking market. This kit uses "resume" as its working term throughout — if your market calls it a "CV" (UK, Australia, and most markets outside the US/Canada), that's the same document; see the Market Distinctions chapter of this guide for the full breakdown of what else differs by market (length, personal information norms, spelling, currency for negotiation), including guidance for markets beyond the four with detailed conventions.

The one rule that matters most

Nothing in this system invents your experience, qualifications, achievements, or results.

Every prompt in this kit is written so the AI only reorganizes, clarifies, and tailors information you provide yourself. If a prompt's output ever states something you didn't tell it — a number, a title, an outcome, a skill — that is a mistake to correct, not a feature to keep. The Truth, Quality & Safe-Use Checklist file exists specifically to catch this before you send anything to an employer. Use it every time.

Honest positioning

Marmalio Apply helps you **build truthful, role-aligned application materials with a clear, ATS-conscious workflow**. It does not promise to "beat" applicant tracking systems, does not guarantee interviews, and does not guarantee a job offer. What it does is remove the guesswork from turning your real background into materials that are clear, consistent, and matched to the role you're applying for. See the Limitations & Safe Use chapter for the full, honest list of what this system does not do.

Before you start: check your market's conventions

Read the Market Distinctions chapter of this guide first if you're outside the USA — it covers terminology (resume vs. CV), expected length, what personal information to include or omit, address format, date format, spelling, and which local salary-research sources to use for Step 8. The templates and prompts in

this kit default to conventions that are safe across all four launch markets (USA, UK, Canada, Australia); that file tells you where those defaults come from and when to adjust them.

The workflow at a glance

1. **Job Posting Analysis** (Prompt 01, Job Posting Analysis, in the Prompt Library) — understand exactly what the role is asking for, without assuming you already match it.
2. **Experience Inventory** (Prompt 02, Experience Inventory, in the Prompt Library) — the foundation step. You answer structured questions about your real background; this becomes the single source of truth every later step draws from.
3. **Resume Bullet Rewrite** (Prompt 03, Resume Bullet Rewrite, in the Prompt Library) — turn your raw inventory into clear, strong resume bullets, with nothing added.
4. **Resume Tailoring** (Prompt 04, Resume Tailoring, in the Prompt Library) — select and order those bullets to match the specific posting from Step 1.
5. **Cover Letter** (Prompt 05, Cover Letter, in the Prompt Library) — a letter grounded only in what Steps 1–2 established.
6. **LinkedIn Optimization** (the LinkedIn Optimization Workflow chapter) — bring your profile in line with the same, truthful positioning.
7. **STAR Interview Preparation** (the STAR Interview Preparation Workflow chapter) — turn your real stories into structured interview answers.
8. **Salary Negotiation Preparation** (the Salary Negotiation Workflow chapter) — optional, once you have an offer or are approaching that stage.
9. **Career-Change Workflow** (the Career-Change Workflow chapter) — optional, if you're moving into a new field and need a transferable-skills narrative instead of a direct-experience one.

How to use a prompt

Every file in the prompt library follows the same format:

- **Purpose** — what this step does and why it exists.
- **Required Inputs** — what you need to have ready before you paste the prompt. Don't skip this; incomplete inputs are the most common cause of weak output.
- **The Prompt** — paste this into ChatGPT, Claude, or your assistant of choice, filling in the bracketed placeholders with your real information.
- **Expected Output** — what a good response looks like, so you can tell if the AI followed the instructions.
- **Truth Check** — a specific question to ask about the output before you trust it.
- **Refinement Step** — what to paste back in if the output needs correcting.

Quick-start path (if you only have 30 minutes)

If you're short on time before a deadline, the minimum useful path is: Step 1 (Job Posting Analysis) → Step 2 (Experience Inventory, focused only on the most relevant 2–3 roles) → Step 4 (Resume Tailoring,

using one of the resume templates) → a fast pass through the Truth, Quality & Safe-Use Checklist. Add the remaining steps as time allows.

What you'll produce

By the end, you will have: a tailored resume (from one of the two one-column templates), a tailored cover letter, updated LinkedIn headline and About section, a set of STAR-format interview answers specific to this role, and — if relevant — negotiation talking points and a career-change narrative. Every one of these is built from your own words, checked against the Truth & Quality Checklist before use.
