Truth, Quality and Safe-Use Checklist -- English Master v1.0

Truth and Quality Checklist

Run every output from this system through this checklist before sending it to an employer, posting it publicly, or speaking it in an interview. This is not optional — it is the safeguard that makes every other honesty instruction in this system actually work in practice.

Part 1 — Truth checks (do these first, every time)

- ☐ Every employer name, job title, and date matches your actual records exactly.
- ☐ Every number (percentage, dollar amount, count, duration) traces back to something you explicitly provided — not an estimate the AI produced on its own.
- ☐ No sentence describes an outcome, result, or impact that you did not state actually happened.
- ☐ No skill or tool is listed that you have not actually used.
- ☐ Every [METRIC NEEDED], [NEEDS INPUT], [NO MATCHING STORY YET], or similar flag has been resolved by you — either filled in with a real detail or the surrounding content adjusted so the gap no longer needs filling.
- ☐ If you compare this document to your Experience Inventory (Prompt 02 output) side by side, every factual claim in the final document is present in the inventory.
- ☐ For a career-change narrative specifically: reading it in isolation, it does not create the impression of direct experience you do not have.
- ☐ For a salary negotiation script specifically: every dollar figure was provided by you, not generated.

Part 2 — ATS-conscious structure checks (resume and cover letter files)

- ☐ Single column throughout — no tables, text boxes, or multi-column layouts used for structural content.
- ☐ No information (contact details, job titles) lives only inside a header or footer.
- ☐ Standard section headings used (Experience, Education, Skills — not creative alternatives like "My Journey").
- ☐ No graphics, icons, or images carrying information that isn't also present as text.
- ☐ Consistent, plain font throughout; no decorative fonts.
- ☐ File saved as both .docx and .pdf, named clearly (e.g., FirstName-LastName-Resume.pdf).

Note: this checklist produces a plain, cleanly-structured document. It cannot and does not guarantee how any specific employer's applicant tracking system will process it — see the Limitations & Safe Use chapter.

Part 3 — Quality and consistency checks

- ☐ Resume, cover letter, and LinkedIn profile agree on every factual claim (titles, dates, skills).
- ☐ No spelling or grammar errors (read the final version aloud once — this catches errors silent proofreading misses).

- ☐ Tone is consistent within each document (doesn't shift from formal to casual mid-document).
- ☐ Resume fits its intended length (one page under ~8 years of experience, two pages maximum otherwise).
- ☐ Cover letter is 250–350 words.
- ☐ Every bracketed placeholder ([ROLE TITLE], [COMPANY NAME], etc.) has been replaced — search the final file for a literal `[` character before sending anything.

Part 4 — Final read

- ☐ You have personally read the complete, final document start to finish, out loud, at least once.
- ☐ You would be comfortable being asked, in an interview, to explain and expand on every single claim in this document.

If the answer to that last item is "no" for anything, that item does not belong in the document — remove or revise it before sending.

Limitations and Safe Use

Read this before you use any part of this system. It exists so you know exactly what this product does and does not do.

What this system is

A structured workflow and prompt library that helps you organize your own, real experience into tailored application materials — resume, cover letter, LinkedIn profile, interview preparation, salary negotiation preparation, and a career-change narrative where relevant — using AI assistants like ChatGPT or Claude as a drafting and organizing tool.

What this system is not, and does not claim

- **This is not a guarantee of an interview.** No document, however well-tailored, can guarantee how any specific employer or hiring process will respond.
- **This is not a guarantee of a job offer.** Hiring decisions depend on many factors outside any application document's control.
- **This does not "beat" applicant tracking systems.** No product can make that claim honestly — ATS software varies widely between employers and changes over time. This system produces a plain, single-column, consistently-structured document (described as "ATS-conscious"), which is a reasonable, honest description of good formatting practice — not a claim about how any specific system will process it.
- **This does not verify facts.** The system does not check whether your dates, titles, or claims are accurate — that responsibility stays with you. It only prevents the AI from adding facts you did not provide; it cannot catch an inaccurate fact you did provide.
- **This is not legal, tax, immigration, or career-counseling advice.** If your job search involves visa status, employment law questions, or a situation requiring professional guidance, consult a qualified professional — this system does not cover that.

- **This does not replace your own judgment.** Every output in this system is a draft for you to review, correct, and approve — not a finished document to submit unread.

Your responsibility as the user

- You are responsible for the accuracy of everything you submit to an employer, recruiter, or on a professional profile, including anything produced with this system's help.
- You are responsible for running the Truth & Quality Checklist (the Truth, Quality & Safe-Use Checklist) before using any output.
- If an AI assistant's output ever states something you did not tell it, that is a fabrication to correct using the Refinement Step in the relevant prompt file — not something to leave in place because it "sounds good."

AI assistant behavior

This system's prompts are written to instruct AI assistants not to invent information. AI assistants can still make mistakes or ignore instructions occasionally. The Truth Check step included with every prompt exists specifically to catch this — it is a required step, not an optional one.

Refunds and support

Refund and support terms are defined on the product page where you purchased this kit and are subject to final confirmation before publication.
